Back End – Donations Administrator Pane

## Overview

The Donations module from CareTech CMS allows you to view and process all of the donations that are submitted on your site.

## Content

From the Donations detail page, you can review and update, if necessary, the information entered by the user when submitting the form. You also have the option of processing (confirming) the donation from this page.

## Administration

The CareTech CMS administrator pane allows website administrators to search for donors by name or ID number, then view individual transactions and archives, as well as new donations.

## Customization

The CareTech CMS Donations module can be customized to meet your hospital foundation's needs.

Check out the **Donations** module in use on this hospital website:
