

# Security SERVICES

CareTech's information security professionals employ a comprehensive, risk-based approach towards each assessment, examining your hospital's policies against industry best practices and all HIPAA and EHR Incentive Program compliance issues. Through a series of department interviews and observations, our team gathers information about your organizational policies to identify possible risks and security gaps.

Your network and websites are evaluated to address potential vulnerabilities, and multiple Internet resources are collected to identify all possible outside risks. Each step of this multiple-angle process is fully documented and communicated back to your organization's leadership to provide insight and education.

With a healthcare-only focus, you can be sure that our team members are trained and certified to the highest industry standards. This gives them an in-depth knowledge of the latest trends and threats to go with a commitment to "Performance Excellence in Healthcare IT" that has earned the 2008, 2009, 2010, 2011, 2013, 2014, 2015/2016 and 2017 Best in KLAS Award for Extensive IT Outsourcing, as well as 2012, 2013, 2015/2016 and 2017 for Partial IT Outsourcing as ranked by healthcare executives and professionals in the Best in KLAS Awards: Software & Professional Services report.
