

Interface Engine & APPLICATION DELIVERY

Because You Don't Have A Rosetta Stone For Your Data.

We Maximize The Delivery Of Customized Data Throughout Your Organization And Beyond.

The IT infrastructure of your hospital speaks in a number of different languages, each as distinct as the department or application that receives it. With the growing coordination of care between external providers has come the need for a more sophisticated translator, or interface engine, that provides real-time information that is customized to the requirements of each recipient.

The Interface Engine & Application Delivery Services from CareTech Solutions offer a wide range of options to fit the unique needs of your healthcare organization. Whether it's part-time support to supplement your staff or the development and implementation of an interface engine, you can be sure that our Integration team has the experience and expertise to design a solution that helps you deliver better care and works for your budget.

The Best Interface Solution Is The One That Starts With You.

We begin every comprehensive assessment in collaboration with your application team and staff to ensure the best approach to code and testing methodologies. Each step is documented to provide the necessary information to design and optimize the infrastructure to meet your current and future integration needs.

At CareTech Solutions, we understand the day-to-day challenges that hospitals and healthcare systems face trying to deliver timely information to their end-users.

That's why we offer a flexible assortment of cost-effective hosting, staffing and interface services that are tailored to our clients' needs.

Healthcare organizations are typically sold a single interface for a high price, which can get expensive when they need to edit and disseminate data to 30 or 40 downstream systems. Our interface engines provide a single point of distribution that supplements, filters and updates all information from the main system in real-time.

With our Interface Engine & Application Delivery Services, you're getting more than a team with extensive experience designing and implementing interface solutions, you're getting a commitment to "Performance Excellence in Healthcare IT" that has earned the 2008, 2009, 2010, 2011, 2013, 2014, 2015/2016 and 2017 Best in KLAS Award for Extensive IT Outsourcing, as well as 2012, 2013, 2015/2016 and 2017 for Partial IT Outsourcing as ranked by healthcare executives and professionals in the Best in KLAS Awards: Software & Professional Services report.

All code is properly established and thoroughly tested to minimize interruptions and support needed after implementation. Trigger points are developed into the software to provide alerts for quick resolution, and graphical dashboards are utilized to monitor the status of all messages routed through the engine.

Our Interface Engine & Application Delivery Services support any system, and are scalable to the size of your organization and have the ability to accommodate fluctuating demands for data exchange. You'll experience an optimal flow of information that meets all compliance requirements and helps your staff deliver better care.
